

DICOS

AWX AUTOMATION

With the AWX automation platform, you save time and gain reproducibility and stability in your IT processes.

OPEN SOURCE INDIVIDUALLY

You can get started right away - with AWX and the DICOS Installation Ready Pack. Optimize your internal processes with the various possibilities of the automation platform. DICOS supports you with consulting, installation and customization - individually tailored to your requirements.

ANSIBLE TECHNOLOGY

Ansible offers a quick entry into the world of automation. Take advantage of the variety of integrations and modules available and map your processes with ease. Ansible works without agents and can therefore be easily integrated into your existing infrastructure.

SECURITY & ADMINISTRATION

Decide exactly which automation you want to provide to which user groups. Manage your systems and access data so that only authorized teams gain access. Separation into different internal organizations is also possible.

SHARE THE KNOWLEDGE OF EVERYONE WITH YOUR ENTIRE TEAM.

Automation provides expert knowledge available to your entire team in just a few clicks. Reduce the workload of your experts now and accelerate recurring activities through sensible automation. Especially redundant tasks are an ideal starting point for automating your processes. The automations can also be conveniently controlled from other systems via a modern REST interface.

ADMINISTRATION MADE EASY

With the AWX dashboard you get all relevant information about your automations in a modern web interface. You can see directly which jobs have been executed on which systems and you have access to all relevant logs and information.

“DICOS supports with the first steps with AWX and Ansible on the way to automating your IT processes. With AWX, you get a complete and ready-to-use solution that can be adapted to the individual requirements of your company at any time.”

Dr. Winfried Geyer, Managing Director, DICOS GmbH

ANSIBLE AWX BASIC SYSTEM

- ▶ Large community
- ▶ Many integrations
- ▶ Traceability
